

**Information on Data Generated by the Device (in accordance with the Data Act)**

Product Category: Treadmill

Product Name: Colt

Data Generated by the Device

Data are generated to enable the user to monitor training parameters.

Parameter	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
Time	The device collects data in real time during training.	Local computer memory (EEPROM)*	Retained on the device – valid until a new training session begins or the device is powered down.	Integer or floating-point value, stored in binary format.	2 bytes	Via computer, only until a new training session begins or the device is turned off.	No	No	-
Distance									
Speed									
Calories									
Pulse									
Body Fat	The device generates results derived from parameters entered by the user: gender, age, weigh.	Local computer memory (EEPROM)*	Retained on the device – valid until a new training session begins or the device is powered down.	Integer or floating-point value, stored in binary format.	2 bytes	Via computer, only until a new training session begins or the device is turned off.	No	No	-

* Data are stored locally, anonymously, and are not assigned to a specific user.
