

Information on Data Generated by the Device (in accordance with the Data Act)

Product Category: Bike

Product Name: Rook

Data Generated by the Device

Data are generated to enable the user to monitor training parameters.

Parameter	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
Time	The device collects data in real time during training.	Local computer memory (EEPROM)*	Stored locally on the device – until a new training session is started or the device is switched off.	-	-	Via computer, only until a new training session is started or the device is switched off.	No	No	-
Speed									
Calories									
Strikes									
Strikes /min									
Total Strikes	The device collects data from all training sessions.	Local computer memory (EEPROM)*	Stored locally on the device – until reset or deletion.	Integer or floating-point value, stored in binary format.	2 bytes	Via computer at any time – computer memory is reset when power supply is disconnected (e.g. by removing batteries).	No	No	After exceeding the maximum value, the counter automatically continues counting from 0, overwriting previous data.

* Data are stored locally, anonymously, and are not assigned to a specific user.

Applications

The user has full control over the use of applications. Using the machine does not require the installation of applications. Using applications requires acceptance of the privacy policy.

App name	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
FitShow	Training and telemetry data (e.g. speed, cadence, heart rate) collected from the equipment via BLE or sensors.	In the cloud or on FitShow servers (in some versions stored in the PRC).	As long as necessary for the purposes for which the data were collected, or as required by law.	FIT (Flexible & Interoperable Data Transfer)	-	The user has access to the history of training sessions; data can be viewed in the application.	Possible sharing in accordance with legal requirements. With external service providers (e.g. analytics, notifications), synchronization with external accounts if the user enables such option.	No	Yes — the user may delete their account/activities; data are deleted or anonymized.
Kinomap	Training and telemetry data (e.g. speed, cadence, heart rate) collected from the equipment via BLE or sensors.	Data stored on Kinomap servers.	Up to 10 years, for some training data / user accounts.	Telemetry data “second-by-second”.	-	The user has access to their activity history, can set privacy settings (public/private), and export their files (e.g. GPX).	Data may be shared: - with external platforms upon request or by the user (synchronization), - with technical service providers, - for marketing / analytics purposes, - if required by law.	Yes — export of GPX routes, ability to share activities.	Yes — the user may delete their account/activities; data are deleted or anonymized.
iConsole +Training	Training and telemetry data (e.g. speed, cadence, heart rate) collected from the equipment via Bluetooth Low Energy (BLE) or sensors.	Stored in iConsole+ systems and their international infrastructure and affiliated entities (USA/EU/international – international data transfer).	As long as necessary for the purposes for which the data were collected or as required by law.	Second-by-second telemetry data.	-	Possibility to view/update/delete data from the account level.	With service providers (payments, support, analytics), authorities based on legal obligations; possibly with the user’s consent.	No.	Yes — the account/data deletion procedure is described in the application’s privacy policy. Data deletion takes up to 30 days.
