

Information on Data Generated by the Device (in accordance with the Data Act)

Product Category: Bike

Product Name: Holo 2

Data Generated by the Device

Data are generated to enable the user to monitor training parameters.

Parameter	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
Time	The device collects data in real time during training.	Local computer memory (EEPROM)*	Stored locally on the device – until a new training session is started or the device is switched off.	-	-	Via computer, only until a new training session is started or the device is switched off.	No	No	-
Speed									
Calories									
Strikes									
Strikes /min									
Total Strikes	The device collects data from all training sessions.	Local computer memory (EEPROM)*	Stored locally on the device – until reset or deletion.	Integer or floating-point value, stored in binary format.	2 bytes	Via computer at any time – computer memory is reset when power supply is disconnected (e.g. by removing batteries).	No	No	After exceeding the maximum value, the counter automatically continues counting from 0, overwriting previous data.

* Data are stored locally, anonymously, and are not assigned to a specific user.
