

Information on Data Generated by the Device (in accordance with the Data Act)

Product Category: Elliptical bike

Product Name: Burn Gold

Data Generated by the Device

Data are generated to enable the user to monitor training parameters.

| Parameter | Method of Data Generation | Data Storage Location | Data Retention Period | Data Format | Data Volume | User Access to Data | Data Sharing | Data Export Option | Option to Delete |
|---------------|--|---------------------------------|---|---|-------------|---|--------------|--------------------|--|
| Time | The device collects data in real time during training. | Local computer memory (EEPROM)* | Stored locally on the device – until a new training session is started or the device is switched off. | - | - | Via computer, only until a new training session is started or the device is switched off. | No | No | - |
| Speed | | | | | | | | | |
| Calories | | | | | | | | | |
| Strikes | | | | | | | | | |
| Strikes /min | | | | | | | | | |
| Total Strikes | The device collects data from all training sessions. | Local computer memory (EEPROM)* | Stored locally on the device – until reset or deletion. | Integer or floating-point value, stored in binary format. | 2 bytes | Via computer at any time – computer memory is reset when power supply is disconnected (e.g. by removing batteries). | No | No | After exceeding the maximum value, the counter automatically continues counting from 0, overwriting previous data. |

* Data are stored locally, anonymously, and are not assigned to a specific user.
