

**Information on Data Generated by the Device (in accordance with the Data Act)**

Product Category: Rower

Product Name: Power10

Data Generated by the Device

Data are generated to enable the user to monitor training parameters.

Parameter	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
Time	The device collects data in real time during training.	Local computer memory (EEPROM)*	The device collects data in real time during training.	FIT (Flexible & Interoperable Data Transfer)	One packet: approx. 10–20 bytes. 1 hour of training: approx. 18–36 kB. Session lasting approx. 3 hours: ≤ 100 kB.	Via computer, only until a new training session begins or the device is turned off.	Integration with applications (list of supported applications below).	No	-
Distance									
Calories									
Strikes									
Time/500m									
Strikes /min									
Pulse	The device collects data from the telemetry belt.	Local computer memory (EEPROM)*	The device collects data in real time during training.	FIT (Flexible & Interoperable Data Transfer)	One packet: approx. 10–20 bytes. 1 hour of training: approx. 18–36 kB. Session lasting approx. 3 hours: ≤ 100 kB.	Via computer, only until a new training session begins or the device is turned off.	Integration with applications (list of supported applications below).	No	-
User program	The device calculates data based on the user's pulse measured in real time.	Local computer memory (EEPROM)*	Stored locally on the device – until reset or deletion.	Integer or floating-point value, stored in binary format.	40 bytes	Via computer at any time – computer memory is reset when power supply is disconnected (e.g. by removing batteries).	No	No	On the computer at any time – computer memory is reset after power disconnection (e.g., by removing the battery).

* Data are stored locally, anonymously, and are not assigned to a specific user.

Applications

The user has full control over the use of applications. Using the rower does not require the installation of applications. Using applications requires acceptance of the privacy policy.

App name	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
iConsole +Training	Training and telemetry data (e.g. speed, cadence, heart rate) collected from the equipment via BLE or sensors.	In iConsole+ systems and their international infrastructure and affiliated entities (USA/EU/international – international transfer).	For as long as necessary for the purposes for which the data were collected or as required by law.	Telemetry data “second-by-second”.	-	Option to review/update/delete data from the account level.	Sharing with service providers (payments, support, analytics), authorities based on law; optionally with the user’s consent.	No	Yes — account/data deletion procedure described in the application’s privacy policy. Data deletion takes up to 30 days.
Kinomap	Training and telemetry data (e.g. speed, cadence, heart rate) collected from the equipment via BLE or sensors.	Data stored on Kinomap servers.	Up to 10 years, for some training data / user accounts.	Telemetry data “second-by-second”.	-	The user has access to their activity history, can set privacy settings (public/private), and export their files (e.g. GPX).	Data may be shared: - with external platforms upon request or by the user (synchronization), - with technical service providers, - for marketing / analytics purposes, - if required by law.	Yes — export of GPX routes, ability to share activities.	Yes — the user may delete their account/activities; data are deleted or anonymized.
