ZIPRO

Information on Data Generated by the Device (in accordance with the Data Act)
Product Category: Treadmill
Product Name: Shred

Data Generated by the Device
Data are generated to enable the user to monitor training parameters.

Parameter	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
Time Distance Speed Calories	The device collects data in real time during training.	Local computer memory (EEPROM)*	Retained on the device – valid until a new training session begins or the device is powered down.	FIT (Flexible & Interoperable Data Transfer)	One packet: approx. 10–20 bytes. 1 hour of training: approx. 18–36 kB. Session lasting approx. 3 hours: ≤ 100 kB.	Via computer, only until a new training session begins or the device is turned off.	Integration with applications (list of supported applications below).	No	-
Steps	The device collects data in real time during training.	Local computer memory (EEPROM)*	Retained on the device – valid until a new training session begins or the device is powered down.	Integer or floating-point value, stored in binary format.	2 bytes	Via computer, only until a new training session begins or the device is turned off.	No	No	-

* Data are stored locally, anonymously, and are not assigned to a specific user.

Applications
The user has full control over the use of applications. Using the rower does not require the installation of applications. Using applications requires acceptance of the privacy policy.

App name	Method of Data Generation	Data Storage Location	Data Retention Period	Data Format	Data Volume	User Access to Data	Data Sharing	Data Export Option	Option to Delete
FitShow	Training and telemetry data (e.g. speed, cadence, heart rate) collected from the equipment via BLE or sensors.	Data are retained for as long as necessary for the purposes for which they were collected or as required by law.	Retention continues only for the time needed to achieve the intended purposes or as mandated by legal provisions.	FIT (Flexible & Interoperable Data Transfer)	-	Users may access their training history and view the data in the application.	Information may be shared as required by law, with external service providers (e.g., analytics, notifications), or synchronized with external accounts if permitted by the user.	No	Yes — the user may delete their account/activities; data are deleted or anonymized.
Kinomap	Training and telemetry data (e.g. speed, cadence,	Data stored on Kinomap servers.	Up to 10 years, for some training data / user accounts.	Telemetry data "second-by-second".	-	The user has access to their activity history, can	Data may be shared: - with external platforms	Yes — export of GPX routes, ability to share activities.	Yes — the user may delete their account/activities;

	heart rate) collected from the equipment via BLE or sensors.					set privacy settings (public/private), and export their files (e.g. GPX).	upon request or by the user (synchronization), - with technical service providers, - for marketing / analytics purposes, - if required by law.		data are deleted or anonymized.
